## WCS's Tyre Blast Cage & Screen

### Your Employee's Protection is Our Top Priority

#### Safety first

While the handling of large tyres at ports is unavoidable, tyre explosions are a real risk. Our certified cages protect your employees when replacing, repairing or refilling them. Ensuring their security when at their most vulnerable.

### Rigorous testing

Available in various sizes and subjected to stringent testing at working pressures of up to 15 bar, make WCS Tyre Blast Cages and Screens the best defense against accidents.

Our design type is tested by DNV GL and approved to "OSHA No.1910.177" and "AFM-CV-045-001 Rev.C" standards. Applicable to both multi and single piece rims.

WCS is now in a position to offer these tested and certified cages and screens to all our customers.

Currently available in 12.00 and 21.00 sizes. Note that the 12.00 cage/screen sizing can handle up to 12R20 size tyres and the 21.00 cage/screen sizing can handle up to 21R25 size tyres.

360-degree mesh and steel bar enclosure guarantees maximum protection for your staff.

A chain enables the screen to be fixed to the machine for maximum protection. Wheels allow for greater mobility.

Door allows quick access to tyre cage.
